

Week 10 Weekly Review – Advanced Server Administration

◆ **Overview**

This week focused on advanced server administration tasks including backup management, Group Policy configuration, task automation, log monitoring, and web server setup.

◆ **Day-wise Summary**

Day 68 – Windows Server Backup

- Installed Windows Server Backup feature
- Configured manual backup
- Understood importance of disaster recovery

Learning: Server backup is critical for data protection.

Day 69 – Group Policy for Users

- Installed AD DS and promoted server to Domain Controller
- Created a new domain
- Configured GPO to restrict user access
- Linked GPO to domain users

Learning: Centralized user control using Group Policy.

Day 70 – Software Deployment via GPO

- Created shared folder
- Configured MSI deployment
- Tested auto-installation on client system

Learning: Automated software deployment improves efficiency.

Day 71 – Linux Cronjobs

- Created scheduled cron jobs
- Verified job execution
- Redirected output to log files

Learning: Task automation using cron improves system management.

Day 72 – Log Monitoring

- Used journalctl and system logs
- Analyzed system and service logs
- Identified errors and warnings

Learning: Logs are essential for troubleshooting.

Day 73 – Nginx Reverse Proxy

- Installed Nginx
- Resolved port conflict issue
- Configured reverse proxy
- Fixed directory listing vulnerability

Learning: Proper web server configuration is critical for security.

◆ Challenges Faced & Solutions

Challenge	Solution
GPO not visible	Installed AD DS
DNS warning	Ignored as new forest
Cron not executing	Corrected file paths
Nginx port conflict	Changed service port

◆ Tools & Technologies Used

- Windows Server 2022
 - Active Directory
 - Group Policy Management
 - Linux (Kali)
 - Cron
 - Nginx
-

◆ Overall Learning Outcome

This week enhanced my understanding of enterprise server administration, automation, centralized policy management, and troubleshooting.

◆ Conclusion

Week 10 provided hands-on experience with real-world server administration tasks and strengthened my system management skills.
